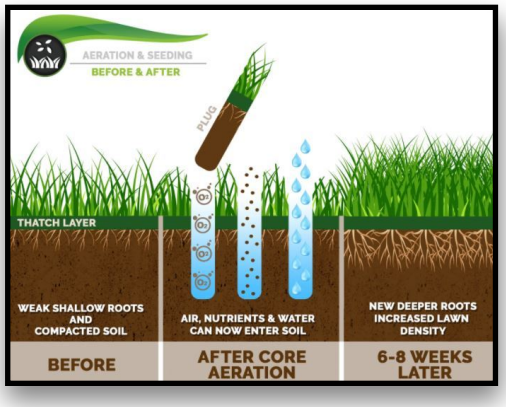
FIRST RESPONSE UPDATES



Special Edition

AERATION/OVERSEEDING

IS IT REALLY THAT IMPORTANT?

At First Response Land, we are once again excited that we will be offering a new service, Aeration and Overseeding this fall! This is another way to ensure you have the nicest yard on the block this coming spring!

Core Aeration is a process where our machine's tines will stick into the ground and pull out a 3 inch "plug" of soil. This opening will now allow better airflow in the soil, allow water, seed and fertilizer to drop further into the soil for better soil contact, soften the soil (especially clay soils in our area) and also aid in better root growth and stimulation!

Aerations and Overseeding can be done any time of year, but the best times are in the Spring and Fall when temperatures are a bit lower. By scheduling to have us perform a Core Aeration and Overseeding this fall, as well as following our Watering Schedule fot the new seed, you are one step closer to having a thick and luscious lawn!

After a season such as 2020, with heavy times of rain as well as weeks of no rain, Aeration/Overseeding will help the soil and turf to recover from any damage that has occurred. Many assume that all they need to do is keep the grass "short" and their yard will look great, but there truly is more to it. To have the yard that others stop to stare at, it is important to Mow at appropriate Heights, Aerate, Overseed and even fertilize regularly!

If you would like to learn more about these services, feel free to reach out today! Our schedule is filling up, so make sure to schedule your Aeration soon!

Benefits of Aeration/Overseeding:

- Allow Airflow In Soil
- Softens Soil
- Allows Water/Seed/Nutrients into the Soil
- Better Seed to Soil Contact
- Aids in Better Root Growth/Stimulation
